PROFESSIONAL SUMMARY

First Class Honours Computer Science graduate with practical experience in software analysis and system improvement gained during my internship at Nawaloka Hospital. I have developed a solid foundation in software development, database management and AI-powered web applications through both academic and practical projects. I am enthusiastic about learning new technologies, solving real-world problems and contributing to the development of high-quality software solutions.

WORK EXPERIENCE

IT Operations & Systems Intern – IT Department

Nawaloka Hospital PLC, Colombo, Sri Lanka

10/03/2025 – 10/09/2025

- Conducted comprehensive on-site analysis of the Hospital Information System (HIS) to identify logic flaws and workflow bottlenecks, proposing technical solutions to improve system efficiency
 - Served as the liaison between end users and the software development team, translating complex clinical requirements into technical Change Request (CR) documentation.
 - Investigated software escalations and database inconsistencies, performing detailed debugging and root-cause analysis to support long-term system stability.
 - Participated in cross-departmental technical meetings to define software requirements, ensuring that proposed fixes aligned with both user needs and technical constraints.
 - Documented system bugs and user feedback in an organized manner, helping the engineering team prioritize high-impact updates in the development pipeline.
-

EDUCATION

- **BSc (Hons) Computer Science | First Class Honours | University of Bedfordshire**
Delivered at SLIIT City Uni, Sri Lanka | 2025 January – 2025 October | Degree Conferred: March 2026
 - **Higher National Diploma (HND)**
SLIIT City Uni, Sri Lanka | October 2022 – December 2024
 - **GCE Advanced Level – Physical Science (English Medium)**
Bandaranayake College, Gampaha | 2018-2021 | Grades: **2 S Passes**
 - **GCE Ordinary Level (Bilingual Stream)**
Kirillawala Central College | 2012 – 2017 | Grades: **8 A's, 1 B**
-

PROJECT EXPERIENCE

- **Narrow Fitness – Industrial AI Gym & Nutrition Ecosystem (React, Node.js, Groq, PostgreSQL) |**
[\[Live Demo\]](#) | [\[View on GitHub\]](#)

Engineered an industrial-grade fitness ecosystem to overcome the inefficiencies of manual gym management and provide context-aware, localized health insights. By integrating the Groq API (Llama 3.3 & 3.1), I architected a high-speed AI assistant for real-time nutrition planning and a Vision-LLM module for automated physical assessments via user-uploaded images. The platform streamlines business operations through a comprehensive dashboard featuring QR-based attendance tracking, automated class scheduling and member lifecycle management. I successfully integrated the PayHere gateway for automated subscription billing, coupled with a multi-channel notification method as well.

- **Master Coach – AI Gym & Nutrition Management Ecosystem (React, Spring Boot, Groq AI, PostgreSQL)** | [\[Live Demo\]](#) | [\[View on GitHub\]](#)

Architected a sophisticated SaaS platform for professional fitness coaches and elite athletes, centered on a hybrid intelligence coaching model. I engineered a high-fidelity Coach-to-Client feedback loop that leverages the Groq API (Llama 3.3) to generate automated "Weekly Coach Briefs," summarizing complex client data (nutrition, activity, and goals) into actionable executive insights for human supervisors. By implementing a type-safe architecture and Spring Boot, I achieved seamless data synchronization and navigation. The ecosystem features granular health telemetry, including AI-driven food logging and interactive progress visualization using Recharts, designed to drive long-term habit mastery and organizational scale.

- **Edu Mate – AI-Powered Web Assistant (React, Spring Boot, PostgreSQL)** | [\[View on GitHub\]](#)

Individual Final Year Project. Engineered an intelligent Q&A tool using Retrieval-Augmented Generation (RAG) to provide precise answers extracted exclusively from uploaded lecture PDFs. Implemented role-based access control for Students, Lecturers and Admins, including secure registration with emails.

- **DNK Super – E-Commerce Platform (PHP, MySQL)** | [\[View on GitHub\]](#)

Lead Backend Developer (Group Project). Architected the entire backend system, delivering features for shopping carts, user authentication, purchase tracking and complex stock management. Contributed to the development of a full-stack e-commerce platform within an Agile/Scrum team. Engineered the server-side logic for core modules, including real-time stock management, administrative control panels, and secure user management systems.

TECHNICAL SKILLS

- **Frontend:** JavaScript, Bootstrap, HTML5, CSS3, React.js, AJAX
- **Backend:** Java, PHP, TypeScript, SQL
- **Frameworks:** Spring Boot, Node.js
- **Databases:** PostgreSQL, MySQL
- **Other:** Git, Jira, Trello

PROFESSIONAL SKILLS

- **Problem Solving:** Strong analytical capability with a focus on algorithmic logic and debugging.
- **Collaboration:** Experienced in group projects and Agile/Scrum team environments.
- **Adaptability:** Proven ability to rapidly learn new frameworks.
- **Time Management:** Efficient at balancing strict academic deadlines with complex project development.

LANGUAGES

- **English:** Professional Proficiency
- **Sinhala:** Native Speaker
